

# Digital signs for hotels

## The Tower

**theside stepbar**

Designed to be the hub for hotel guests and the local community, the Side Step Bar merges a contemporary bar experience with a sporting touch.

Open from lunch till late, delicious hot and cold fayre are served with a fine selection of beers and wines to suit every palate. From a quick bite to a luxurious Marriott Burger, guests can enjoy a relaxing meal while watching the latest news and sport headlines on our large screen TV's.

Meeting the needs of either a busy match weekend or a relaxed mid week evening, the Side Step Bar can provide a unique service at all times.

The Marriott Hotels logo, featuring a stylized globe icon above the text "MARRIOTT HOTELS".

# Rivermeade digital signs

Rivermeade manufactures its own range of digital signs for hotels. Customers include Marriott, Thistle, Hilton, Crowne Plaza and many others. Screens are available in a wide variety of sizes from 12" to 56" with wall mounted or free-standing housings custom made from materials to suit your interior - stainless steel and back painted glass are the most popular choices. Your logo can easily be incorporated. We do our best to ensure that your digital sign does not look like a television mounted onto the wall.

## Simple to use

Rivermeade offers PrintSign which we believe is the simplest and most effective digital sign control currently available.

- you create a screen using our Word or PowerPoint templates which can be tailored to your precise needs.
- go to print and choose the name of a sign rather than the name of a printer.
- the screen is immediately displayed and stored in the sign's memory.
- advanced scheduling options and screen transitions can be selected at the time of printing.
- most users choose to schedule a complete week's activities in a single session.
- the PrintSign driver can be used on any PC on your network with password control.
- there can be as many signs on the network as you choose.

## Cost effective

- the cost of PrintSign is included within the cost of the sign so there are no ongoing payments.
- the amount of training that is required is minimal.
- because PrintSign is so simple to use difficulties with trained staff leaving are minimised.

# PrintSign questions

## **Do I need to install any special software on my PC?**

No. Rivermeade digital signs require no special software to create information – you just use whatever application you are familiar with. As with a conventional printer you install a simple “driver” to let your PC send information to a sign over your network.

## **So I can use whatever application I want to create a display?**

Yes. We supply templates for both Word and PowerPoint configured to our standard screen sizes and it is very simple to create additional templates for other applications.

## **What happens if I print more than one page?**

Your sign simply displays each page one after another as a slide show. You can control how fast this happens when you print your document and you can also choose from a range of screen transitions.

## **How many pages can a Rivermeade digital sign hold in memory?**

Many depending on how much information is on each page. Large colour images are memory hungry.

## **Can I print something now and have it displayed later?**

Yes. There is a full scheduling capability. When you print a document you can tell the sign whether to display it now or at some later time. You can even set up repeats – programming a particular image to be displayed every lunchtime, for example.

## **Do I need a dedicated PC to drive the sign?**

No. A Rivermeade digital sign operates entirely independently of your PC. You use your PC to create information and print it to your sign. The sign then holds the information in its memory and your PC is immediately free to do other things. You can control them all from one central PC or from many PCs on your network - all you need is a Printsign driver installed on each PC.

## **Can I have more than one sign?**

Yes. You can have as many signs on your network as you need.

## **Can I remove the sign from the network after I've printed to it?**

Yes. You can disconnect your sign from the network and even move it at any time. Content sent to the sign is retained in the sign memory whilst it is turned off and displays again when you turn it on - this makes it ideal for temporary or moveable signage.

## **Can I operate a Rivermeade digital sign remotely?**

Yes. The sign sits on your network like a printer. You can control it from anywhere on your network.

# Digital lobby signs

A wall mounted digital sign housed in stainless steel at the Hilton Waldorf Hilton in London.

A free-standing digital sign housed in back painted toughened glass with a printed logo at the Marriott Lingfield Park.

A landscape format sign with a back painted toughened glass housing at The Parc Thistle Cardiff.

A more traditional wood and brass housing for a free-standing sign at Le Grand Intercontinental in Paris.

## Digital lobby signs

This complex construction for The Langham from bronze toned brass with a deep etched pattern design and gold leafed text is an example of what Rivermeade, and probably only Rivermeade, can achieve. This is a long way from a television screen mounted on a wall bracket.

# Meeting room signs

## RoomSign

RoomSign is designed to integrate with an existing room management system to display current meeting information outside a series of meeting rooms. Alternatively RoomSign can be controlled using a PrinSign driver.

RoomSign can be supplied with an interactive touch screen which provides 'Grab now', 'Extend booking', 'Finish now' and 'Check-in' functionality.

LobbySign is a sister product to RoomSign and is designed to display an overview of meeting room bookings on a single sign placed in a reception or lobby.

The background, fonts and colours on a RoomSign or LobbySign can be fully customised to reflect your corporate branding and interior finishes.

## Smart Sign Server (SSS)

SSS is a dedicated Rivermeade software application designed to interface between a room booking system - e.g. Delphi or Microsoft Outlook and a series of electronic RoomSigns and LobbySigns. When booking information is entered into the room booking system it will appear at the correct time on the sign outside an individual room.

Please give us a call to discuss how SSS might be integrated into your management database.

Meeting room signs housed in stainless steel in use at the Guoman Tower in London. This series of signs is controlled using PrintSign

A standard RoomSign with a typical screen generated by Smart Sign Server integrated with a management database.
